

Setup Instructions

The following steps will enable integration between Elvanto and ChurchBot. They can only be carried out by the Elvanto administrator for your organisation.

1. Navigate to **Settings**

2. Scroll to the bottom and click on **Integrations**

Other

Integrations

Set up and configure third-party integrations.

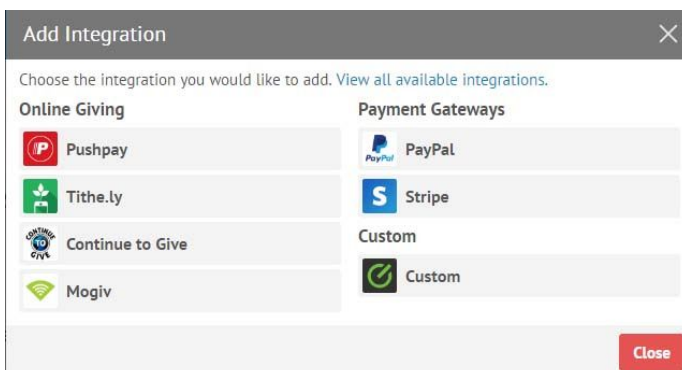

Scheduled Email & SMS

View and manage scheduled email and SMS.

3. Click on **Add Integration**

4. Choose **Custom**

5. Enter (copy/paste) the details as below. The **redirect** field must match exactly. Click **Save** to complete.

Homepage

<https://www.churchbot.net>

Redirect to here after granted access

<https://churchbot.net/auth/callback>

The screenshot shows a form titled "Add App Integration" with a close button in the top right corner. The form contains the following fields and content:

- App Name:** ChurchBot
- Client ID:** (empty)
- Client Secret:** (empty)
- Description:** Access your elvanto through Facebook Messenger
- App Icon (min. 200px):** Choose File No file chosen
- Homepage:** <https://www.churchbot.net>
- Redirect to here after granted access:** <https://churchbot.net/auth/callback>

Below the form, there is a note: "We'll use your icon, description and homepage to reinforce your credibility. We show it to the user when you ask for account access." At the bottom right of the form, there are two buttons: "Close" (red) and "Save" (green).

6. Click on the integration you just created and this time the **Client ID and Client Secret** will be filled in. You will need to enter these into the ChurchBot registration page at the link below. Open the link below in another browser window.

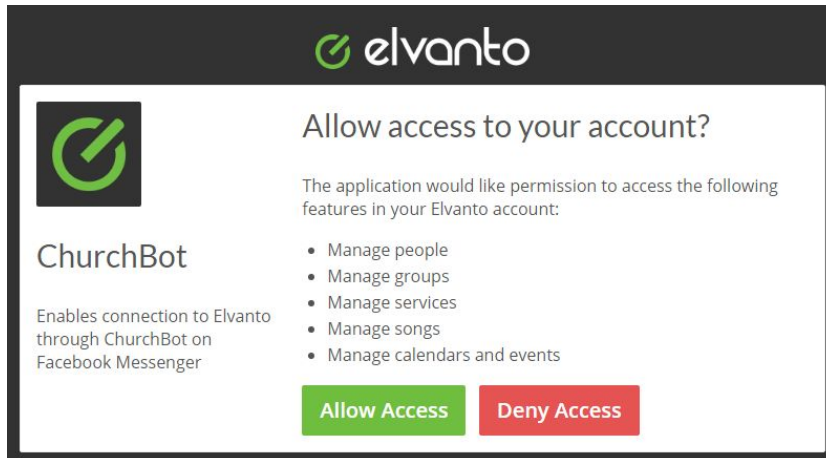

<https://churchbot.net/auth>

7. In the ChurchBot registration page, copy/paste the **Client ID** and **Client Secret from Elvanto** into their respective fields. In the Church ID field, enter the an ID for your church. Your users will need to enter this when they register on Messenger so you should select something brief and memorable, such as your church's initials or the prefix of your church's elvanto domain.

Then, **click on Proceed** and click on [Authorise](#) on the next screen to connect back to Elvanto.

8. You must now **login to Elvanto** using an administrator Elvanto username and password. Click **Allow Access** to the 5 roles listed.

9. You should be presented with a Completion screen confirming that authorisation has succeeded and you are now able to enter your contact details for your subscription. When you have entered your details, click Complete, then close this tab and also close the Authorise tab from step 7. (If you get a message that the authorisation has not succeeded, you will need to return to step 6 above.)

10. You are now ready for members to register to access elvanto through ChurchBot on Facebook Messenger. A connection between each member's facebook identity and their identity in their church's elvanto needs to be established.

Connect to <http://m.me/churchbot>, enter the ID of your church from step 7, then the other information required.
